their city or any other location by name and fetches weather data from the Weather API. The API responds to the request by returning data, which is then displayed to the user.

- **Coin Sorter and Counter**

Basically it is a kind of which sorts the coins on the basis of their size. Here we insert a coin in the machine and it will slide into it, after sliding into the machine on the screen it will be displayed the total number of particular coins inserted till now and the sum of the coins.

- **BPower**

BPower means Brainpower. This is a game-based website where you will need to remember the words shown on the screen. Then based on that you need to react whether the word is already seen or it is new. In total you will be having three lives if you lost three lives then you will lose and the final score will be displayed.
